Tampa, FL

Education

Bachelor of Science, **Computer Engineering** – University of South Florida Expected May 2027

GPA: 3.77 | Dean's List (3x) | Coursework: FPGA System Design, Computer Architecture

Skills

Programming Languages: Python, C/C++, SQL, JavaScript, TypeScript, Luau, Verilog, VHDL

Infrastructure & Networking: Proxmox VE, Tailscale/WireGuard, SSH, LXC, ACL policies

Data & Cloud Platforms: AWS S3, Snowflake, Apache Iceberg, Collibra

Tools: Git, GitHub, Bitbucket, MCP Servers, Kiro, Roblox Studio, Claude Code, Codex

Methodologies: Agile/Scrum, Jira

Experience

Data Solutions Intern – Depository Trust & Clearing Corporation – Tampa, FL June 2026 - August 2026

- Developed an Apache Iceberg PoC for Snowflake and AWS S3, demonstrating a **50% reduction** in duplicate storage overhead and savings of up to **98%** on JSON-heavy datasets.
- Automated delivery planning intake by connecting a Jira MCP server to Kiro, turning team alignment documents directly into structured epics and user stories instead of hand-written tickets.
- Made Iceberg table relationships explorable in plain English by building a knowledge graph of Iceberg table metadata and lineage, fronted by a chatbot running a 70B-parameter Llama model.
- Configured and deployed Snowflake MCP servers that streamlined Iceberg table creation, with version control in Bitbucket and data governance workflows in Collibra.

Projects

Microsoft-Sponsored Capstone – Agentic Development August 2026 - Present

- Researching AI agent architectures, tools, and use cases across the software development lifecycle.
- Collaborating with a team to design and demonstrate agentic workflows for coding, testing, review, and deployment.
- Evaluating tradeoffs in security, cost, output quality, and developer experience to guide responsible AI-agent adoption.

Homelab Infrastructure December 2024 - Present

- Built a Proxmox host that runs media, game, and network services side by side, each isolated in its own container or VM, sharing one storage pool safely.
- Automated nightly backups and verified them with a full restore.
- Closed every inbound port to the internet, moving remote access to a private Tailscale mesh where each device reaches only what it needs.
- Built a Python relay that wakes my desktop from my phone over cellular, hardened with dropped privileges, source-address validation, and rate limiting.

Sky Slam – Published Roblox Multiplayer Game March 2026 - April 2026

- Built a modular, strictly typed Luau codebase with reactive cross-platform UI and real-time game-state synchronization.
- Integrated Claude and Codex into Roblox Studio via MCP for in-editor generation and type-aware code review.
